

Herbal garden

SIMATS has always focused on reducing the negative impacts of pollution in our environment and contribute towards a cleaner and healthier environment through its green initiatives

With an advantage of being a larger campus and an aim to be one of the greener universities, our university has upped their game in recent years to become more environment friendly providing a study location for outdoor lovers.

To create an illusion of a country side campus, the university features 30 acres devoted to botanical gardens and trees including 200 varieties of plants and trees adapted to our tropical climate.

In view to promote our ancient sciences, the colleges of medical, pharmacy and allied health sciences have a special focus on traditional science in primary health care. The departments have a well established herbal garden consisting of rare medicinal herbs and plants collected all over India that can sustain our climate. This promotes our students' understanding towards the natural habitat and also acts as a material for conducting environmentally friendly projects.

Using our natural herbal resources we have developed various products like herbal toothpaste, herbal mouth wash, intracanal medicaments, herbal hand sanitizers, wound dressing materials etc.
