

INCUBATION FACILITIES AT SIMATS

Saveetha Institute of Medical and Technical Sciences (SIMATS) offers incubation facilities for start-ups and entrepreneurs. The institute has set up more than 10 pre-incubation units and incubation cells to facilitate the development of innovative products by students and faculty members. Our incubation centre provides a conducive environment for innovation and growth by providing resources, mentorship, and networking opportunities. The Saveetha Dental College has started an Incubation centre called Viana Soft™ and has signed deals to provide training, protocol and manage the recipient college for a year. One of the notable initiatives is STEPUP, a design-driven Science and Technology Incubator promoted by the Saveetha School of Engineering. This incubator provides students and faculty members with the resources and infrastructure needed to develop and commercialize their products. The Saveetha School of Management has also signed MOUs with organizations such as BYST, Andhra Chamber of Commerce, and EDII. These partnerships allow students to participate in various entrepreneurship and leadership development programs and gain industry exposure.
